DETAILED ACTION

Reasons For Allowance

1. The following is a statement of reasons for the indication of allowable subject matter:

Claim 1 has not been rejected using prior art because no reference, or reasonable combination thereof, could be found which disclose or *suggest a surgical tool assembly comprising: a surgical tool structured to expand the tubular structure, the surgical tool including an elongate body and a first leg having a first end engageable with the inner surface of the tubular structure and a second leg having a second end engageable with the inner surface of the tubular structure, said first and second ends being moveable away from each other to apply a radially outwardly directed force to the inner surface of the tubular structure and cause expansion of the tubular structure to increase a cross-sectional area of the path along a portion of the path; and an actuator configured to move axially with the elongate body of the surgical tool to move said first and second legs away from each other, in combination the rest of the claimed limitations as set forth in claim 1. As to claim 10, the prior art does not teach the invention including, an elongate member structured to expand the tubular structure, the elongate member having a first end and a second end and an intermediate member disposed between the first and second ends; first and second handles connected to the first end of the elongate member, the handles configured to move radially toward and away from each other; first and second legs connected to the second end of the elongate member, the first and second legs engageable with the inner surface of the tubular structure, the first and second legs being moveable away from each other to apply a radially outwardly directed force to the inner surface of the tubular structure; and an actuator configured to move longitudinally to move the first and second legs away from each other.*

As to claim 16, the prior art does not teach the invention including, a surgical tool structured to expand the tubular structure, the surgical tool includes a shaft having first and second ends; a handle pivotally connected to the first end of the shaft, the handle configured to move between a first, expanded, configuration and a second, contracted configuration; and first and second jaws pivotally connected to the second end of the shaft, the first and second jaws configured to move between a first, contracted configuration and a second, expanded configuration, the first and second jaws engageable with the inner surface of the tubular structure; wherein contracting the handle causes expansion of the first and second jaws, in combination with the rest of the claimed limitations as set forth in claim 16.
